

I&J mowers operate very efficiently with a unique scissor cutting action that lets you mow with virtually no plugging. Clean cutting means faster regrowth. Working widths of 7, 8 or 9 ft.

- Bar can cut in any position
- Three point hitch or trailing for tractor, cart or draft hitch
- Gasoline engine, PTO or ground drive
- Rubber tires or steel wheels
- Comes with extra blade
- Bar lifts vertically with 12" cylinder
- A safety release, with automatic re-hooking helps guard against damage to the bar when objects are hit
- Heat treated blades hold their edge longer and produce a cleaner cut which means faster regrowth
- Bottom blades are farther apart; therefore only a few blades are cutting at once (2/3 less torque required)

## **STANDARD DUTY** *Ground Drive PTO Forecart*

- Two speeds (350/500 RPM @ 3.5mph)
- 28" diameter wheels
- Suitable to power sickle bar mowers, rakes, tedders, fertilizer spreaders, sprayers, etc.
